

student handouts and/or transparencies or other materials for your use. If you plan to have the students do part or all of the Extension suggestions, you will want to add additional materials to your list. You may also need to locate other sources of information or telephone numbers to complete the Extension. Some Extensions can be started simultaneously with the regular activity.

As you read through the activity, highlight any CAUTION or NOTE and decide whether you will do optional suggestions. Check the suggested time for completion of the activity and add time needed to do any extension activities. The time needed may vary from class to class. These activities have all been field-tested in primary school classrooms. However, you might want to do a trial run of the activity yourself to evaluate the time needed and identify areas where minor problems might occur. It is also a good idea to mark points in the text where breaks can be taken to divide the activity into class periods.

The factsheets included at the end of the guide and the background material included in each activity should provide enough information necessary for your preparation. Further reading on the subject can be found in the list of resources at the conclusion of each activity. If these are not readily available, you may want to check other books on environmental concerns.
