

BioVapor, a 1-D Vapor Intrusion Model with Oxygen-limited Aerobic Biodegradation

Thomas McHugh, GSI ENVIRONMENTAL INC. ♦ George DeVaul, SHELL GLOBAL SOLUTIONS ♦ Roger Claff, API

Conceptual Model

What is BioVapor?

- 1-D Analytical Model**: Version of Johnson & Ettinger vapor intrusion model modified to include aerobic biodegradation (DeVaul, 2007).
- Oxygen Mass Balance**: Uses iterative calculation method to account for limited availability of oxygen in vadose zone.
- User-Friendly**: Simple interface intended to facilitate use by wide range of environmental professionals.

KEY POINT:
Free, easy-to-use vapor intrusion model that accounts for oxygen-limited aerobic vapor intrusion.

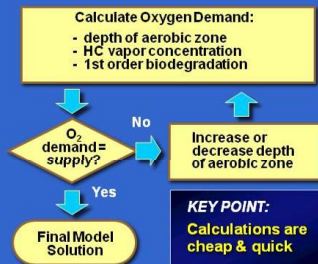

BioVapor: Conceptual Model

- Diffusion only in anaerobic zone
- Diffusion & 1st order biodegradation in aerobic zone
- Advection, diffusion, and dilution through building foundation

BioVapor: Oxygen Mass Balance

Iterative Calculation Method

KEY POINT:
Calculations are cheap & quick

Model Inputs

Environmental Factors

Oxygen Boundary Condition

- Open Soil: (Constant O₂ Conc.)**: Constant oxygen concentration at top of vadose zone: - 21% oxygen in dirt crawl space - Measured oxygen concentration below solid foundation
- Solid Foundation: (Constant Air Flow)**: Constant oxygen flux across top of vadose zone: - Air flow from atmosphere to below building foundation
- Fixed Aerobic Depth**: User specified depth of aerobic zone: - Based on measured vertical profile in vadose zone - No O₂ mass balance

Vadose Zone Vertical Profile

Chemicals

- Risk Drivers:** Vadose zone transport/oxygen demand and indoor concentration/risk.
- Other Hydrocarbons:** Only vadose zone transport/oxygen demand - Not considered risk drivers - No well accepted tox. values
- Hydrocarbon Surrogates:** Only vadose zone transport/oxygen demand - One surrogate can represent multiple hydrocarbons

Detailed Results

Chemical	Source	Depth (ft)	Concentration (ppm)	Indoor Concentration (ppm)	Risk
BTEX	Soil	0.5	100	10	Low
BTEX	Soil	1.0	50	5	Low
BTEX	Soil	1.5	25	2.5	Low
BTEX	Soil	2.0	12.5	1.25	Low
BTEX	Soil	2.5	6.25	0.625	Low
BTEX	Soil	3.0	3.125	0.3125	Low
BTEX	Soil	3.5	1.5625	0.15625	Low
BTEX	Soil	4.0	0.78125	0.078125	Low
BTEX	Soil	4.5	0.390625	0.0390625	Low
BTEX	Soil	5.0	0.1953125	0.01953125	Low
BTEX	Soil	5.5	0.09765625	0.009765625	Low
BTEX	Soil	6.0	0.048828125	0.0048828125	Low
BTEX	Soil	6.5	0.0244140625	0.00244140625	Low
BTEX	Soil	7.0	0.01220703125	0.001220703125	Low
BTEX	Soil	7.5	0.006103515625	0.0006103515625	Low
BTEX	Soil	8.0	0.0030517578125	0.00030517578125	Low
BTEX	Soil	8.5	0.00152587890625	0.000152587890625	Low
BTEX	Soil	9.0	0.000762939453125	0.0000762939453125	Low
BTEX	Soil	9.5	0.0003814697265625	0.00003814697265625	Low
BTEX	Soil	10.0	0.00019073486328125	0.000019073486328125	Low

Biodegradation Rates

- Petroleum rapidly biodegrades in vadose zone with oxygen
- Geometric mean first-order rates:
 - BTEX = 0.79 1/hr
 - Aliphatics = 71 1/hr (DeVaul, 2007)
- Biodegradation occurs in pore water
- User can edit default biodegradation rates

Model Outputs

Vapor Intrusion Risk Results

Chemical	Source	Depth (ft)	Concentration (ppm)	Indoor Concentration (ppm)	Risk
BTEX	Soil	0.5	100	10	Low
BTEX	Soil	1.0	50	5	Low
BTEX	Soil	1.5	25	2.5	Low
BTEX	Soil	2.0	12.5	1.25	Low
BTEX	Soil	2.5	6.25	0.625	Low
BTEX	Soil	3.0	3.125	0.3125	Low
BTEX	Soil	3.5	1.5625	0.15625	Low
BTEX	Soil	4.0	0.78125	0.078125	Low
BTEX	Soil	4.5	0.390625	0.0390625	Low
BTEX	Soil	5.0	0.1953125	0.01953125	Low
BTEX	Soil	5.5	0.09765625	0.009765625	Low
BTEX	Soil	6.0	0.048828125	0.0048828125	Low
BTEX	Soil	6.5	0.0244140625	0.00244140625	Low
BTEX	Soil	7.0	0.01220703125	0.001220703125	Low
BTEX	Soil	7.5	0.006103515625	0.0006103515625	Low
BTEX	Soil	8.0	0.0030517578125	0.00030517578125	Low
BTEX	Soil	8.5	0.00152587890625	0.000152587890625	Low
BTEX	Soil	9.0	0.000762939453125	0.0000762939453125	Low
BTEX	Soil	9.5	0.0003814697265625	0.00003814697265625	Low
BTEX	Soil	10.0	0.00019073486328125	0.000019073486328125	Low
